SUMMARY

Informatics Engineering student at Institut Teknologi Bandung focused on artificial intelligence and software engineering. Experienced in building and shipping full-stack web systems, from database and API design to production frontends, alongside data engineering work. Interested in turning complex data into practical tools that solve real problems. Seeking a Software Engineer or AI Engineer internship.

EDUCATION

Institut Teknologi Bandung Bandung, Indonesia
Bachelor of Engineering, Informatics Engineering 2025 – 2029 (expected)
GPA: 3.69 / 4.00 | 18 credits completed
Relevant Coursework: Algorithms and Programming, Discrete Mathematics, Computational Logic, Computer Organization and Architecture

EXPERIENCE

Techno Entrepreneur Club (TEC) ITB Remote
Back End Developer May 2026 – Jul 2026

- Built the backend of the TEC Festival competition registration system, finalizing the REST API endpoints for the production web application
- Designed the database schema storing participant biodata and registration status, and implemented user authentication so entrants could self-register and manage their own submissions
- Architected QRIS payment integration to present payment details, validate transactions, and persist payment status per participant

Data Engineer Intern Dec 2025 – Jul 2026

- Sourced and cleaned raw datasets, standardizing inconsistent records before ingestion
- Built a pipeline delivering cleaned data to the TEC website in real time, replacing manual update steps

StudentsxCEOs Grand Summit 15th Remote
Full Stack Developer — Next.js, React, TypeScript, Tailwind, Supabase Feb 2026 – Jul 2026

- Built a registration platform serving 200+ users, implementing dual-track flows for two separate competition categories
- Implemented authentication and persistence on Supabase with Postgres, plus a dual-storage upload pipeline for participant submissions
- Synced registration records to Google Sheets via API, giving the organizing committee live visibility without database access

Parade Wisuda ITB April 2026 Remote
Front End Developer — React, TypeScript Feb 2026 – Apr 2026

- Developed the public-facing website for the April 2026 graduation parade, building the landing page, live countdown timer, and FAQ section

PROJECTS

HujanNet — *Python, pycomlink, Time-Series Analysis* 2026 – Present

- Initiated and built a rainfall estimation system deriving precipitation intensity from microwave backhaul signal attenuation between cellular towers, targeting flood early warning in urban Indonesia
- Processed commercial microwave link data with pycomlink to reconstruct spatial rainfall maps at finer resolution than existing weather radar coverage
- Authored the full technical proposal submitted to BRIN AIDeaNation 2026

PulihGo — *React Native, Firebase, Gyroscope API* 2026

- Built a post-stroke rehabilitation app using smartphone gyroscope sensors to track patient range of motion in real time, removing the need for dedicated medical hardware
- Designed an exercise scoring system and progress dashboard, grounded in Indonesian Ministry of Health stroke prevalence data

Gacha Makan — *Next.js, TypeScript, Supabase, PostGIS* 2026

- Built a restaurant discovery app that resolves decision fatigue by surfacing nearby options through a weighted random selection mechanic
- Implemented the recommendation backend on Next.js route handlers, using PostGIS radius queries over Supabase Postgres to rank candidates by proximity

ACHIEVEMENTS

- 1st Place, Health Track — Garuda Hacks 7.0 National Hackathon, 2026

LEADERSHIP & ORGANIZATIONAL EXPERIENCE

STEI-K ITB 2025 Vertera — **Computing Division, School of Electrical Engineering and Informatics** Nov 2025 – Jul 2026
Head of Internal Division

- Led 35 staff across two departments: a 22-person Academic Section delivering educational support and resources, and a 13-person Internal Relations Section running community programs

TECHNICAL SKILLS

Languages	Python, TypeScript, JavaScript, C, SQL
Front End	React, Next.js, Vite, TailwindCSS, React Native
Back End	Node.js, REST API design, authentication, payment integration
Data	ETL pipelines, data cleaning, NumPy, Pandas, time-series analysis
Databases & Cloud	PostgreSQL, Supabase, Firebase, Vercel
Tools	Git, GitHub, Figma, Google Sheets API
