SUMMARY

Informatics Engineering student at Institut Teknologi Bandung focused on artificial intelligence and software engineering. Experienced in building and shipping full-stack web systems, from database and API design to production frontends, alongside data engineering work. Interested in turning complex data into practical tools that solve real problems.

EDUCATION

Institut Teknologi Bandung — Bandung, Indonesia
Bachelor of Engineering, *Informatics Engineering* — 2025 – 2029 (expected)
36 credits completed
Relevant Coursework: Algorithms and Programming, Discrete Mathematics, Computational Logic, Computer Organization and Architecture

EXPERIENCE

Inkubator IT, HMIF ITB — Bandung, Indonesia
Associate, Tech Development — 2026 – Present

- Build internal and client-facing web products as part of the incubator's technology development track, working from requirements through delivery

Techno Entrepreneur Club (TEC) ITB — Remote
Back End Developer — May 2026 – Jul 2026

- Built the backend of the TEC Festival competition registration system, finalizing the REST API endpoints for the production web application
- Designed the database schema storing participant biodata and registration status, and implemented user authentication so entrants could self-register and manage their own submissions
- Architected QRIS payment integration to present payment details, validate transactions, and persist payment status per participant

Data Engineer Intern — Dec 2025 – Jul 2026

- Sourced and cleaned raw datasets, standardizing inconsistent records before ingestion
- Built a pipeline delivering cleaned data to the TEC website in real time, replacing manual update steps

StudentsxCEOs Grand Summit 15th — Remote
Full Stack Developer — Next.js, React, TypeScript, Tailwind, Supabase — Feb 2026 – Jul 2026

- Built a registration platform serving 200+ users, implementing dual-track flows for two separate competition categories
- Implemented authentication and persistence on Supabase with Postgres, plus a dual-storage upload pipeline for participant submissions
- Synced registration records to Google Sheets via API, giving the organizing committee live visibility without database access

Parade Wisuda ITB April 2026 — Remote
Front End Developer — React, TypeScript — Feb 2026 – Apr 2026

- Developed the public-facing website for the April 2026 graduation parade, building the landing page, live countdown timer, and FAQ section

PROJECTS

IITrack — *Next.js, TypeScript, TailwindCSS* — 2026

- One of two developers on Phase 2 of Inkubator IT HMIF ITB's cross-division workflow system, replacing manual handoffs between divisions with a single tracked pipeline
- Delivered build and user acceptance testing on a fixed seven-week schedule, coordinating scope with two project managers

HujanNet — *Python, Prisma, Time-Series Analysis* — 2026

- Built the data engineering layer of a flood early warning system that turns existing cellular backhaul links into passive rain gauges, requiring no new hardware deployment
- Modeled commercial microwave link topology and designed the Prisma schema; implemented the catchment and alerting modules over ITU-R P.838 attenuation inversion and IDW spatial reconstruction

PulihGo — *React Native, Firebase, Gyroscope API* — 2026

- Built a post-stroke rehabilitation app using smartphone gyroscope sensors to track patient range of motion in real time, removing the need for dedicated medical hardware
- Designed an exercise scoring system and progress dashboard, grounded in Indonesian Ministry of Health stroke prevalence data

Gacha Makan — *Next.js, TypeScript, Supabase, PostGIS* — 2026

- Built a restaurant discovery app that resolves decision fatigue by surfacing nearby options through a weighted random selection mechanic
- Implemented the recommendation backend on Next.js route handlers, using PostGIS radius queries over Supabase Postgres to rank candidates by proximity

ACHIEVEMENTS

- 3rd Place — AIDeaNation 2026, National AI Competition by Indonesia's National Research and Innovation Agency (BRIN)
- 1st Place, Health Track — Garuda Hacks 7.0 National Hackathon, 2026
- Bronze Medal — National Youth Math Olympiad (NYMO) 2024, Indonesian Young Scientist Association (IYSA)
- 2nd Place — Olimpiade Sains Geografi (OSAGI) 2024, Universitas Islam 45 Bekasi
