SUMMARY

Informatics Engineering student at Institut Teknologi Bandung focused on AI and software engineering. Builds full-stack web apps, data pipelines, and ML models, with recent work on flood early warning and recommendation systems.

EDUCATION

Institut Teknologi Bandung — Bandung, Indonesia
Bachelor of Engineering, Informatics Engineering — 2025 – 2029 (expected)
GPA: 3.69/4.00 | 36 credits completed
Relevant Coursework: Algorithms and Programming, Discrete Mathematics, Computational Logic, Computer Organization and Architecture

EXPERIENCE

Inkubator IT, HMIF ITB — Bandung, Indonesia
Associate Software Engineer — 2026 – Present
- Build web products for the incubator and its clients, from requirements to delivery

Techno Entrepreneur Club (TEC) ITB — Remote
Back End Developer — May 2026 – Jul 2026
- Built the backend and REST API for the TEC Festival competition registration system
- Designed the participant database and self-service login for registration and submissions
- Integrated QRIS payments with transaction validation and per-participant payment status

Data Engineer Intern — Dec 2025 – Jul 2026
- Cleaned and standardized raw datasets before ingestion
- Built a pipeline that pushes cleaned data to the TEC website in real time

StudentsxCEOs Grand Summit 15th — Remote
Full Stack Developer | *Next.js*, *TypeScript*, *Supabase* — Feb 2026 – Jul 2026
- Built a registration platform for 200+ users with separate flows for two competition tracks
- Set up Supabase auth, Postgres storage, and a dual-storage upload pipeline
- Synced registrations to Google Sheets so the committee could track them without database access

Parade Wisuda ITB April 2026 — Remote
Front End Developer | *React*, *TypeScript* — Feb 2026 – Apr 2026
- Built the landing page, live countdown, and FAQ for the graduation parade website

PROJECTS

HujanNet | *Next.js*, *Prisma*, *Python*, *PyTorch* — 2026
- Built a rain mapping dashboard for flood operators in the upper Ciliwung catchment, turning cell tower link attenuation into rain rates (ITU-R P.838, IDW) with per-watershed alerts
- Trained wet/dry link classifiers in PyTorch on Italian and Swedish data; the LSTM raised MCC from 0.23 to 0.54 over a threshold baseline
- Reached 2.2 mm/h RMSE against radar on 364 real links in Gothenburg, and kept IDW after an MLP scored worse (5.0 vs 3.5 mm/h)

Gacha Makan | *Next.js*, *Supabase*, *PostGIS*, *Gemini API* — 2026
- Built a food picker for Bandung and Jatinangor students that filters by budget and radius, backed by 394 tests
- Implemented a 26-feature contextual bandit; Thompson Sampling and LinUCB cut regret by 79% and 84% versus random in simulation
- Compared five cuisine classifiers on 509 names; Gemini Flash-Lite led with 0.66 macro-F1 against 0.52 for Naive Bayes

IITrack | *Next.js*, *PostgreSQL*, *Prisma*, *Playwright* — 2026
- Co-developed Phase 2 of Inkubator IT's project workflow system, tracking client projects through nine stages with access rules for ten roles
- Shipped build and UAT in seven weeks behind CI with lint, type checks, Vitest, and Playwright

PulihGo | *React Native*, *Firebase* — 2026
- Built a post-stroke rehab app that tracks range of motion through the phone gyroscope, with no extra medical hardware
- Designed exercise scoring and a progress dashboard for patients

ACHIEVEMENTS

- 3rd Place, AIDeaNation 2026, national AI competition by BRIN (National Research and Innovation Agency)
- 1st Place, Health Track, Garuda Hacks 7.0 National Hackathon 2026
- Bronze Medal, National Youth Math Olympiad (NYMO) 2024, IYSA
